About NeuroDerm

NeuroDerm is a clinical-stage pharmaceutical company developing drug-device combinations for central nervous system (CNS) disorders that are designed to overcome major deficiencies of current treatments and achieve enhanced clinical efficacy through continuous, controlled administration. NeuroDerm has three product candidates in different stages of development which offer a solution for almost every Parkinson's disease patient from the moderate to the very severe stage of the disease. NeuroDerm has developed a line of levodopa and carbidopa (LD/CD) product candidates administered through small belt pumps that deliver a continuous, controlled dose of LD/CD. The LD/CD product candidates are ND0612L and ND0612H, which are used for treatment of moderate and advanced Parkinson's disease patients, respectively, and which are delivered subcutaneously.

3 Pekeris St., Rabin Science Park, Rehovot 7670212, ISRAEL. Tel: 972-8-9462729, Fax: 972-8-9461729

In addition, NeuroDerm is developing ND0701, a novel subcutaneously delivered apomorphine formulation for patients who suffer from moderate to severe Parkinson's disease and who do not respond well to LD/CD. NeuroDerm is headquartered in the Weizmann Science Park in Rehovot, Israel.
